**DETAILED ACTION*****Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-10 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-13 of U.S. Patent No. 6,583,225 in view of Plochocka et al (US 5,635,568). The secondary reference teaches the extrusion process recited with gel polymers, as herein recited. To employ the process of extrusion taught by the secondary reference with the gel of the primary reference would have been an obvious modification.

Claims 1-10 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-5 of U.S. Patent No. 6,706,817 in view of Plochocka et al (US 5,635,568). The secondary reference teaches the extrusion

process recited with gel polymers, as herein recited. To employ the process of extrusion taught by the secondary reference with the gel of the primary reference would have been an obvious modification.

Claims 1-10 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-12 of U.S. Patent No. 5,635,568 in view of Plochocka et al (US 6,583,225) or Plochocka et al (US 6,706,817). To employ the gel components of either secondary reference in the process of the primary reference would have been an obvious modification.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Plochocka et al (US 5,635,568) in view of Plochocka et al (US 6,583,225) or Plochocka et al (US 6,706,817).

The reference to Plochocka et al (US 5,635,568) shows the reactive extrusion process using an anhydride polymer.

The references to Plochocka et al (US 6,583,225) and Plochocka et al (US 6,706,817), both show the contemplated resins, as recited and herein claimed. To employ these resins, since they are drawn to anhydride polymers, in the reactive

extrusion process of the primary reference would have been an obvious modification to a skilled artisan at the time the invention was made.
